Workforce Development Program

Workforce Development is an integral part of future development activities. In working with area businesses and industries, K-12 schools, community colleges, and universities, CDF provides a key link to workforce training resources and opportunities. The CDF employs a full time workforce development professional who works with company officials to secure employee training needs and act as a key link to all available resources.

The Community Development Foundation has successfully partnered with Itawamba Community College to train thousands of local business and industry employees. This demand-driven training utilizes the consortium method to ensure low cost and high impact. Ongoing training is vital to the success of area companies and critical to individuals to remain competitive in the workforce and today's global economy.
